CodeBuilder is a CLI tool which allows developpers to use simple commands and helpers inside AWS CI/CD tools like CodePipeline and CodeBuild.

Quickstart

Installation

Install the latest CodeBuilder release via **pip**:

```
pip install codebuilder
```

You may also install a specific version:

```
pip install codebuilder==0.0.1
```

Note: The latest development version can always be found on [GitHub](#).

A CodeBuild Tutorial

This tutorial will show you how to use CodeBuilder with [AWS CodeBuild](#).
